Subject: WDFW Response to Ecology Comment Letter on Voights Creek Hatchery
Attachments: 13-1146.pdf

Categories: Red Category

In response to the comment letter sent 4/16/13 from the Southwest Regional Office of the Department of Ecology to Mr. Mark Eberlein concerning the Voights Creek Hatchery Project, WDFW will certainly comply with toxic cleanup requirements as specified in the letter. WDFW will have inspectors onsite who will immediately notify Ecology at the provided contact number if any evidence of contaminated soils or groundwater is detected at any point in this construction process. Contractors will also be informed of this notification requirement and required to follow it. Thank-you for your comments and for providing the appropriate toxic cleanup information,

Marty Peoples
